

This user notice refers to all Mobi-vehicle™, A2X type, semi-rigid matting with high traction capabilities. Read carefully the following method and always follow the safety rules.

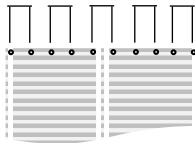

Direction for use

- Step 1: **Level the ground** and remove large stones and debris.
- Step 2: **Unroll the mat at the desired place.** The identification label is on the downside.
- Step 3: **Anchor the first end of the mat.** Each pair of eyelets must be used to secure the mat with the staples.

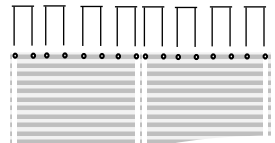

1m | 3.25'

2m | 6.5'

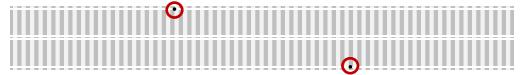

3m | 10'

- Step 4: **Pull the mat taut from the opposite end.** Do not use vehicle to stretch the mat.
- Step 5: **Anchor the opposite end.** For a perfect finish, bury the end of the mat (dig a 10cm - 4" trench before anchoring the mat

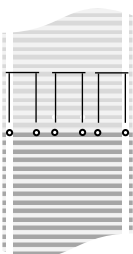

- Step 6: **Anchor the sides of the mat (if equipped) with spikes.**

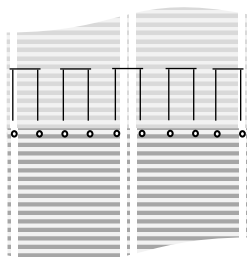

Mats connection

- Step1: **Align the two mats end-to-end.**
- Step2: **Overlap the mats** and align the eyelets to allow a staple to anchor both mats in the ground.
- Step3: **Anchor the staples through the overlapped eyelets.**

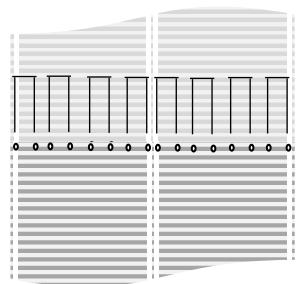

1m | 3.25'

2m | 6.5'

3m | 10'

Maintenance:

- Use a leaf blower or a broom to remove sand, dust or debris from the mat.
- For Boatramp use, seaweeds have to be removed regularly.
- If too much sand, dust or debris accumulates underneath, re-install it.
- Store the mats rolled-up, horizontally (do not store mats vertically).
- Before storage, rinse with clear water.

Safety rules:

- Check underground facilities (gas, electricity...) before installing the mats.
- Use safety glasses, gloves and shoes during installation.
- Never use for other applications.
- After installation check regularly that no part (stake, staple, spike...) can injure people or damage equipment (vehicle, truck, building...).

Anchoring option:

- Concrete anchoring kit
- Wood anchoring kit
- Hard ground anchoring kit
- Underwater anchoring kit on soft & hard ground
